CONFIDENTIAL

A METHOD AND SYSTEM FOR CLIENT AWARE CONTENT AGGREGATION
AND RENDERING IN A PORTAL SERVER

ABSTRACT OF THE DISCLOSURE

5   A method and system for client aware content aggregation and rendering in a portal server. The method includes the step of receiving content from a plurality of channels. The content from the channels is aggregated using an aggregator. The aggregator is configured to process the content using a first markup language. The aggregated content is processed using a rendering engine. The rendering engine is configured to output the aggregated

10   content in a second markup language tailored for a client device. The method further includes outputting the aggregated content in the second markup language to the client device.
